
We Have Uncovered Japan's National Secret to Its Success as a Nation!

You may ask — what is the source of their success? Here it is:

1. **Life expectancy.**
   Since 1947, the average life expectancy of Japanese people has reached about 85 years. The graph below shows a decline between 1940 and 1947 due to World War II and the nuclear bombings of Hiroshima and Nagasaki in 1945. After that, the Japanese government did something with its population, and life expectancy has mysteriously improved ever since.
2. **Health of the population.**
   Japan is considered the healthiest nation in the world. People reportedly remain healthy until about 80 years old, with old age beginning after 90. Research indicates that many Japanese people enjoy excellent health even at 90 and only then consider themselves elderly.
3. **WHO statistics (reported by Associated Press in 2005).**
   According to WHO statistics, Japanese people reportedly remain disease-free until age 78. Japan was even called "a country of immortal women."
4. **Statement by Dr. Guy Abraham (USA, 2005).**
   Professor of medicine Guy Abraham stated:
   "Either the Japanese are mutants living on large doses of iodine, or we have all been deceived, or this is a well-planned conspiracy, or the worst form of bioterrorism against humanity…"

Traditionally, Japan is known for long working hours and high stress levels.

Average annual working hours:

- Japan: about 1,600–1,800 hours
- USA: about 1,750–1,800 hours
- Germany: about 1,350–1,400 hours
- France: about 1,500–1,600 hours
- United Kingdom: about 1,600–1,700 hours

Life expectancy comparison (2023)

1. Japan — 84.95 years
2. France — 83.35 years
3. United Kingdom — 82.31 years
4. Germany — 82.18 years
5. USA — 79.74 years
6. Kazakhstan — 74.53 years (10 years lower than Japan)

Japan ranks among the world leaders in longevity, even surpassing countries with lighter workloads.

Japan does not openly disclose the secret of its national health in the media or on the internet. However, Professor Guy Abraham claims to have uncovered it. By analyzing dietary supplements prescribed by Japanese doctors, he concluded that the average Japanese person unknowingly consumes about **200 mg of iodine per day**.

This is claimed to be **1,000 times higher** than intake in most other countries — and allegedly the key to Japan's success.

The company **LLP "iod"**, a partner and distributor of the modern Kazakh biotechnology company **MTI Medical**, which produces advanced natural nano-biotech products, offers Kazakhstan residents a chance to become as successful as the Japanese nation.

Our cutting-edge natural nano product is made from Japanese seaweed and is called **Nano Iodine**. Its formula is complex and uses what is described as the world's best molecular matrix, allowing iodine intake of **500 mg, 1,000 mg, or even 2,000 mg or more per day** — both for prevention of up to 90% of diseases and for treatment purposes. It is claimed to be the gentlest preparation in the world.
